

# Telescopic Pole **S RTP**

## **CONTENTS:**

- 1 x Telescopic Pole
- 1 x Multi-functional platform
  - 1 x Prong
  - 1 x Tough Hook
  - 1 X Flat Bullet

The Telescopic Pole is a series of conical tubes which interlock when extended. By sliding the section of tube out, starting with the smallest, the pole is quickly extended to the desired working length.

When extending, ensure that each section is fully 'locked' to the next. Failure to do so may result in the product collapsing mid use.

The Telescopic Pole is self supporting, so is perfectly suited to spanning ceilings and voids to route or retrieve cable. It is compatible with all Cable Rod attachments, allowing you to use any of the innovative attachment range.

Remember, the range of use of the Telescopic Pole is limited only by your imagination!

### **Using the Telescopic Pole:**

To use the Telescopic Pole, simply slide out the first section containing the multi-functional platform.

Then extend each section fully and lock into position, this is done by twisting each section using a small amount of tensile force. Please ensure each section is fully locked before you proceed to pull out further sections. To stop the pole from opening when not in use, please make sure the rubber section of the platform is securely fitted into the housing of the main body.
