

Cable installation tools
can increase
productivity on site

Fast fix

With best practice being championed by the Government as a way to increase efficiencies, Queen's Awards winner Super Rod is encouraging electricians to use labour saving tools to speed up work.

It is an approach which has been adopted by Bron Afon Community Housing who manage approximately 8000 homes in Torfaen, South Wales. Working with Super Rod, the Bron Afon maintenance workforce were equipped with the latest in labour saving tools. Head of Repairs and

Improvements, Vince Cooper said: "Since we began utilising Super Rod's cable installation tools for rewires and refurbishments, we have noticed a significant increase in efficiency and productivity, helping us to exceed our targets. We have been able to increase response times."

Malcolm Duncan, managing director of Super Rod said: "Our products are designed to increase working efficiency and maximise productivity. For anybody working with cable, these products will save you time, reducing costs and increasing profits dramatically. Refurbishment accounts for approximately 70% of UK construction.

Super Rod products are designed to negotiate the most challenging environments causing the minimum amount of disturbance to the original construction; often referred to as performing the equivalent of 'key hole' surgery for the home."
